Aktīvisma komponente

The overall aim of the course is to provide the students with theoretical and practical guidance on multidisciplinary planning practice put in use in a particular place. The hands-on approach enables the Master's students to obtain new, but also put in practice their already acquired skills in defining urban problems and solutions - negotiating them in multi-disciplinary and multi-national groups.

The course combines insight from urban planning, landscape architecture and urban policy. While focusing on approaches and solutions for urban regeneration and development of city environment. The course encouraged students to observe the specifics of the chosen study site. This involved researching the history of the place and how it has developed until now as well as culture, socioeconomic aspects, existing development policies and the everyday life of a local resident. The goal of this course was not only concerned with theory and presenting new ideas for development, but also making things happen in the real world and building relationships between students. A crucial part of the course each year, including 2018, is The Urban Action – a social event or happening organised by the students themselves in the particular study site in order to interact with people, prompt citizen participation and awareness and all in all to spread positive attitude and have fun. While working in multidisciplinary and multicultural teams, students had the chance to define their professional as well as personal strengths and weaknesses, develop their communication and negotiation skills as well as teamwork and presentation skills.

ACKNOWLEDGEMENTS

We would like to express our gratitude to NORDPLUS programme for the financial support; a special thank you to our professors and mentors Friedrich Kuhlmann, Jekaterina Balicka, Jonas Büchel, Gunta Lukstiņa, Pēteris Šķiņķis, Sampo Ruoppila and Jani Vuolteenaho for organising the urban study course and inspiring us to do our best during this endeavour. Thank you for your guidance and tireless advising during our creative moments even late at night. Thank you for the constructive critique and challenging questions while shaping our ideas. It was a truly worthy experience and a memorable adventure for all of us.

Paldies
