

Address labels with SSCC barcodes

The address label is a unique parcel identification that ensures that each parcel contains correct and sufficient information for completing the shipment. By using address labels with standard SSCC barcodes, you can be sure that the address label is correctly filled out. You can prepare the address labels while placing your transportation order online.

The departure address indicates the location where the parcel was picked up. This is not always the address of the consignor.

The delivery address should be indicated in detail. The consignee can be the consignor's customer or another company.

Transportation instructions can be added, if

The delivery ID is the same number as your DB Schenker order number.

Parcel quantity is indicated in each address label (parcel ID / quantity).

The SSCC barcode is a unique identification number.

Shipment pick-up date

The postal code of the delivery address can be coded into the address label.

The waybill number combines parcels in one waybill.

The actual weight of the shipment is essential information.

The SSCC (Serial Shipping Container Code) barcode is saved in our systems, enabling you to track your shipment, for example.
